

## **Data Analytics process**

Application in Real life scenario case study

**Senario :** traveling to another destination in vacation.

**Answer:**

**Plan:** First we decide where we have to travel to go in vacation. Eg: beach or mountains, etc

**Prepare:** Then we have to check our budget and how can we enjoy our whole vacation/trip.

**Process:** Then we actually need to check where we should go. like if we are going to beaches then what do we want there ,eg: clean beaches, types of local foods, water sports.

**Analyze:** we obviously won't go to places which have lot of crowds and places where we already have been to, we will also check for the means of transportations and check schedules and the network facilities there.

**Share:** Now we communicate with our parents and decide which destination fits our Description(liking).

**Act:** Then we finally go on our trip in vacation.
